## CARE & CLEANING

As with all quality plumbing supplies, care must be taken during installation and regular long term use. There is a protective coating on all goods to protect the surface from scratching or tarnishing during shipping and storage. The protective coating is not meant to withstand normal day to day use on items which come into contact with acids (found in most foods) and corrosives (found in all detergents). Trim To The Trade does not warrant the wearing quality of the protective coating.

### INSTALLATION

Decorative items should be the last items to be installed after final cleaning of the surrounding areas.

DO NOT USE putty or silicone sealer containing a curing acidic base for installation. These items will damage the protective coating through heat generation.

### CARE AND CLEANING

Use a soft cloth to clean, dampened if necessary.

DO NOT USE compounds containing acids (muriatic, phosphoric, hydrofluoric, or toluene), solvents (xylene or touene), or other cleansers (such as bleach, alcohol, aromatic oils, or those containing abrasives).

All of these products will cause damage to the protective coating and may further damage or destroy the base material through etching or pitting.
